Certification Strategy and Contributions
HPCCF Virtual Workshop

Christian Meesters (+ HPC Certification Forum)

HPC Group – Johannes Gutenberg-University of Mainz

2020-05-18

About Me

- I hope everyone is doing well.
- I hope we all be teaching *in personam*, soon-ish, again.

- PhD in Biophysics
- PostDoc in Genetic Epidemiology (Programming)
- detour in industry
- since 2014 Computational Scientist
- working with/at Tier II/III clusters . . .
- . . . as life science contact and lecturer

Outline

ZDV Zentrum für **Datenverarbeitung**

Two Types of Users

# Range

# How the Site Manager looks on HPC Education

⚠ Exaggeration Warning ⚠

- ressources are always limited
- teaching ressources even more
- integration into HPCCF might offer more (still needed) courses

How Joe User looks on HPC
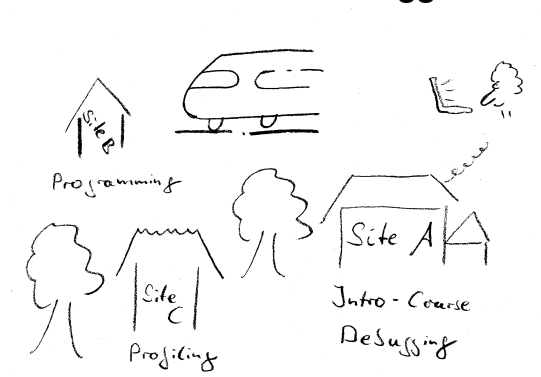

⚠️ **Exaggeration Warning** ⚠️

Most users

- . . . use 3rd party applications . . .
- . . . will need (yet not always visit) an intro course . . .
- . . . perhaps a scripting course . . .
- . . . only *really* interested in workflows taylored for their need.

And will never leave their site for other HPC courses!

Zentrum für **Datenverarbeitung**

# How Bruce Coder looks on HPC

⚠️ **Exaggeration Warning** ⚠️

Only power users

- . . . will select *their* topics . . .
- . . . will care to travel for computing topics . . .
- . . . will rarely need intro courses . . .

Zentrum für **Datenverarbeitung**

# HPCCF for Teachers – Anyway

Teachers, basically, get two benefits:

1. simpler / better content and course objective transparency
2. feedback from HPCCF with regard to course quality ("Did my students pass? How good?")
3. Plus: We have learned, that users appreciate when a course content apparently is not conceived in isolation.

Zentrum für **Datenverarbeitung**
Strategy

When conceiving a Certification Strategy the different views are in our mind.

Zentrum für **Datenverarbeitung**

Selecting Questions
Questions are randomly choosen from a pool:

- the pool may itself be a bundle of sub-branches of the skill tree
- each question will have a number of right and wrong answers in case of multiple choice questions

$\curvearrowright$ All examininations will be based on different sets of questions.

Zentrum für **Datenverarbeitung**

On Cheating

1. By confronting with random questions no perfect preperation can be accomplished.
2. There is a time-limit per question.
3. A registration prior to a test session is required.

No online system without ID checks and other measures is safe against cheating! Yet, our measures will raise awareness.

Boosting Acceptance

Want to hire a scientist?
We intend to provide a (sub)set of question
for prospective employers. This way they
will have an idea of the background, if a
solicitant waves a HPCCF-certificate.

ZDV Zentrum für **Datenverarbeitung**
Disclaimer

Some examples are inspired by Greg Wilsons book

Teaching Tech Together (CRC Press, 2020)

Some ideas are based on own experience, some on other sources.

Purposes . . .

Before diving into Question Design, note:

- a question can be asked with a certain aim
- different courses ask for different knowledge / skills
- $\curvearrowright$ questions need to be designed and choosen with care

Multiple Choice – When?

Multiple Choice Questions (MCQs) are popular when designing e-learning tests . . .

> **? Question**
> When are they most suitable?

Suppose you are teaching children and you give them this MCQ:

> **🔧 Excercise – Type: Testing Conceptions**
> What is 37 + 15?
>
> - ⓐ 52 correct
> - ⓑ 42 child did not understand "carrying"
> - ⓒ 412 child treated every column seperately
> - ⓓ 43 knows she has to carry 1, but to wrong column

Zentrum für **Datenverarbeitung**

Multiple Choice – When? (continued)

The Young-Child question rephrased for newbies to the SLURM batch system:

> 🔧 **Excercise – Type: Testing Conceptions about SLURM**
>
> Think of a cluster with 20 core nodes. If a job is submitted with the following parameterisation, how many nodes are reserved?
> ```
> #SBATCH -n 20
> #SBATCH -c 2
> ```
> ⓐ **2** correct
>
> ⓑ **4** user did correctly multiply, but is not aware of the 20 cores
>
> ⓒ **1** user did not multiply by `-c 2`
>
> ⓓ **unkown without** `N`-flag user did not understand the concept

Zentrum für **Datenverarbeitung**

What is in the Arsenal?

MCQs aren't everything:

1. Freetext (if short and explicit)
2. Filling in blanks (for code; to be implemented)
3. Parson Problem (can by done as MCQ; shown in a minute)
4. Tracing (can by done as MCQ; in a minute)

ZDV Zentrum für **Datenverarbeitung**
Fill in Blanks

Filling Blanks is a (technical) variation on Freetext. It is more specific and the *blank screen of horror* issue is avoided, whilst the test might be testing "vocabulary". An example:

🔧 Excercise – Type: Bash Operators

Which operator has to be filled in the place of '_' to print the statement in line 3?
1: `number=4`
2: `if [ $((number _ 2 )) -eq 0 ]; then`
3:   `echo "$number is even"`
4: `fi`

ℹ Hint

The answer is a single character.

Zentrum für **Datenverarbeitung**

Parsons Problems

Parsons Problems, too, avoid the *blank screen of horror* problem and also the vocabulary testing. Instead they allow the examinee to concentrate on the control flow.

> 🔧 **Excercise – Type: Bash Loop & Math**
>
> Rearrange these lines to sum the values.
>
> **1:** `done`
> **2:** `values=(1 2 3 4)`
> **3:** `for v in $values[@]; do`
> **4:** `total=$((total + v))`
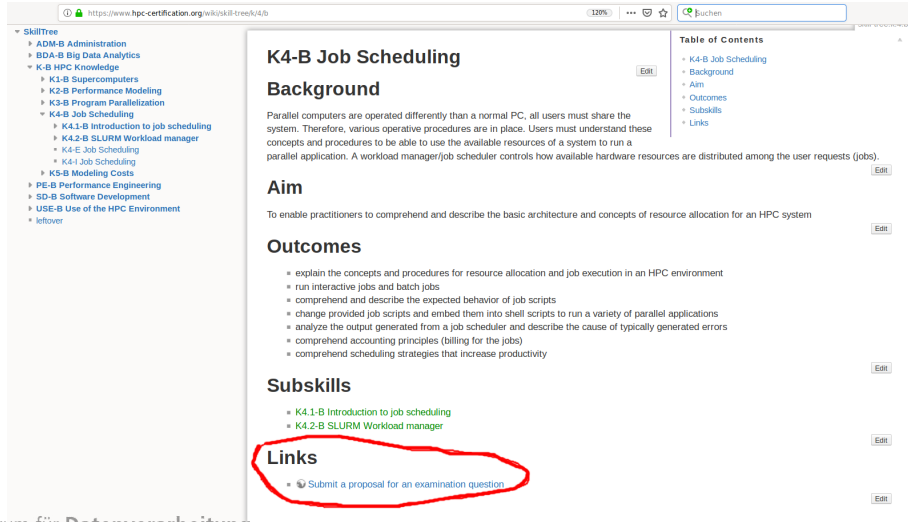

Real tasks can be longer and intricated - allowing test of control flow understanding.

> ℹ️ **Note**
>
> The answer can be a free text, e. g.: "2 3 4 1", which is easy to parse and check.

ZDV   Zentrum für **Datenverarbeitung**

24 / 30

Contributions via the HPCCF-Wiki

Contributions via the HPCCF-Wiki II

Each HPCCF wiki ⌕ page contains a link. It leads to a little form asking for:

- contact mail
- to select a learning objective from a pre-formatted list
- to supply the question you thought of
- and (in case of a multiple choice question) the possible answers.

> 🔧 **Evaluation Process**
> Now, HPCCF-member evaluate the submitted question. If approved, it will be for-matted and merged into the pool of questions for the choosen topic / skillset.

ZDV Zentrum für **Datenverarbeitung**

Certification: Assessment Prototype

1. User takes multiple-choice test online (any time!)
   - A combination of JavaScript and a web service
   - System selects number of questions randomly from a pool
     - By submitting questions the related usage-allowance is granted to HPCCF
   - In case of sufficient numbers the system draws from a pool of different possible answers (MCQ-case).
2. Choices are submitted to the web server
3. *Manual approval* of the result
4. Automatic creation of certificate and returned by email
   - Permanent computer-verifiable proof is created about certification of skills
     - Return a text version with GPG signature
     - Return a link that can be verified on hpc-certification.org
5. Privacy: minimize information stored on servers, keep some for statistics

Includes some measure to prevent cheating and brute forcing (e.g., delay)
